Job Description

This is a grant funded position and is not eligible for severance pay.

The Department of Developmental, Molecular & Chemical Biology at Tufts University School of Medicine was formed to integrate the traditional studies of developmental and molecular biology with the innovation of chemical biology to facilitate fundamental understanding of disease processes as well as the development of novel therapeutics. One area of focus is signal transduction mechanisms in development and disease, especially in cancer. Structural biology and structure-based drug development is a second area of strength.

Work in collaboration with the senior investigator in the host laboratory. S/he works independently to participate in or lead a portion of a research project or projects. The research associate contributes
