**Job Description**

A Biochemistry research group with a long-standing interests in mechanisms underlying DNA replication, repair and mutagenesis seeks a candidate with demonstrated experience working in the general area of nucleic acid metabolism (DNA and/or RNA). The available position is focused on defining the role that protein-protein interactions play in regulating the coordinate actions of the replicative and various DNA damage tolerant DNA polymerases.

**Responsibilities Include:**

- \* Independently manage a research project that is focused on protein-protein interactions.
- \* Work collaboratively with graduate and undergraduate students.
- \* Design experiments and manage research

Outstanding Benefits Package Working at UB comes with benefits that exceed salary alone. There are
