Position Summary

A **Postdoctoral Associate** position is available in the [Department of Biochemistry](#) immediately to investigate the relationship among chromatin, transcription and their interactions with environment.

Specifically, the project will:

- Address a fundamental knowledge gap about how chromatin structure determines transcription at a global scale and how they respond to different environmental factors.
- Integrate cutting-edge genomics and computational analyses to investigate transcriptome, epigenome and chromatin architecture.

Learn more:

- Our [benefits](#), where we prioritize your well-being and success to enhance every aspect of your life.
- Being a part of the [University at Buffalo community](#).

As an Equal Opportunity / Affirmative Action employer, the Research Foundation will not discriminate in its employment practices due to an applicants race, color, religion, sex, sexual orientation, gender identity, national origin and veteran or disability status.

Minimum Qualifications

- PhD degree in any relevant field of Biology
- Molecular biology or bioinformatics skills

Preferred Qualifications

- Ph.D. or M.D./Ph.D. in molecular biology or computational biology
